

Please read this document carefully before using this product. The guarantee will be invalidated if the device is damaged by not following instructions detailed in the manual. The company shall not be responsible for any damage or losses however caused, which may be experienced as a result of the installation or use of this product.

ENDA EUP SERIES PID UNIVERSAL CONTROLLER

Thank you for choosing ENDA EUP Series Universal Controller Devices.

- ▶ Dual setpoint value can be selected.
- ▶ PT100 ,J, K, L, T, S, R sensor (thermocouple) types can be selected.
- ▶ 0-20mA, 4-20mA, 0-10V, 2-10V, 0-25mV and 0-50mV input selections.
- ▶ Auto calculation for PID parameters (SELF TUNE).

Self tune for automatic PID calculation or manually enter PID parameters if known.

- ▶ Three different feature can be assigned to digital input.
- ▶ Three different feature can be assigned to F function key.
- ▶ Soft-Start feature.
- ▶ Analogue, SSR or Relay Output Control selection.
- ▶ 0-20mA and 4-20mA Analogue Output Control selection.
- ▶ Up to 16 steps Profile Control.
- ▶ A1 Relay output programmable as first Alarm or Cooling control output.
- ▶ C/A2 Relay output can be used as second Alarm or Temperature Control output.
- ▶ Heating/Cooling control selection.
- ▶ Zero point input shift.
- ▶ In case of sensor failure, periodically, auto-periodically running or relay state can be selected.
- ▶ RS485 Modbus RTU communication protocol feature (Specify at order).
- ▶ CE marked according to European Norms.

Order Code : EUP

0-50mV input	-1999...+9999 (max. scale range 10000)		± 0,2% (for full scale) ± 1 digit

ENVIRONMENTAL CONDITIONS

Ambient/storage temperature	0 ... +50°C/-25 ... +70°C
Max. relative humidity	Relative humidity 80% for temperatures up to 31°C decreasing linearly to 50% relative humidity at 40°C.
Rated pollution degree	According to EN 60529; Front panel : IP65, Rear panel : IP20
Height	Max. 2000m

⚠ KEEP AWAY device from exposed to corrosive, volatile and flammable gases or liquids and DO NOT USE the device in similar hazardous locations.

ELECTRICAL CHARACTERISTICS

Supply	90-250V AC 50/60Hz ; 10-30V DC / 8-24V AC SMPS
Power consumption	Max. 5VA
Wiring	Power screw-terminal connections: 2.5mm ² , Signal screw-terminal connections: 1,5mm ² .
Line resistance	Max. 100 Ohm
Data retention	EEPROM (minimum 10 years)
EMC	EN 61326-1: 2013 (Performance criterion B satisfied for EN 61000-4-3 standard).
Safety requirements	EN 61010-1: 2010 (Pollution degree 2, overvoltage category II)

OUTPUTS

C/A2 Output	Relay : 250V AC, 8A (for resistive load), NO+NC (Control or Alarm2 Output selection).
A1 Output	Relay : 250V AC, 8A (for resistive load), NO (Alarm1 and Cooling Control Output selection).
ANL/SSR Output	Max. SSR Output ; 0-20mA, 4-20mA, 24V 20mA. Max. load resistance ; 600 Ohm (12 bit 0.2% accuracy).
Life expectancy for relay	Without load 30.000.000 switching; 250V AC, 8A (resistive load) 300.000 switching.

CONTROL

Control type	Single Setpoint and Alarm Control.
Control algorithm	On-Off / P, PI, PD, PID (selection).
A/D converter	14 bit.
Sampling time	Min. 100ms.
Proportional band	Can be adjusted between %0.0 and %100.0 . If Pb=%0.0 , ON-OFF control is selected.
Control period	Can be adjusted between 1 and 125secs.
Hysteresis	Can be adjusted between 1 and 50°C/F.
Output power	Setpoint value ratio can be adjusted between %0 and %100 .

HOUSING

Housing type	Suitable for flush-panel mounting according to DIN 43 700. EUP4420 : W48xH48xD87mm, EUP7420 : W72xH72xD97mm, EUP8420 : W48xH96xD87mm, EUP9420 : W96xH96xD50mm.
Dimensions	
Weight	Approx. 400g (250g for EUP4400) After packing.
Enclosure material	Self extinguishing plastics

⚠ Avoid any liquid contact when the device is switched on.
DO NOT clean the device with solvent (thinner, gasoline, acid etc.) and / or abrasive cleaning agents.

ENTERING TO PROGRAMMING MODE

During "Programming Mode", if no key is pressed for 20 sec, settings automatically saved and device returns to the "Running Mode" (to the home screen). Alternatively, by pressing **F** key "Running Mode" is entered and by pressing both **SET** and **F** keys at once, settings automatically saved and device returns to the "Running Mode" (to the home screen).

RUNNING MODE

During in "Programming Mode", if no key is pressed for 20 sec, settings automatically saved and device returns to the "Running Mode" (to the home screen). Alternatively, by pressing **F** key "Running Mode" is entered and by pressing both **SET** and **F** keys at once, settings automatically saved and device returns to the "Running Mode" (to the home screen).

A

CLoL = Lower limit for CIA2 Output control, setpoint value. Can be adjusted between 0 and CLH .

CLH = Upper limit for CIA2 Output Control, setpoint value. Can be adjusted between CLL and Upper scale value.

CPb = Proportional band value. Can be adjusted between 0.0% and 100.0%. If CPb parameter set to 0.0%, On-Off control will be accepted.

CHyS = Hysteresis value for CIA2 Output. Can be adjusted between between 1°C and 50°C.

CI = Integral value for CIA2 Output. Can be adjusted between 0.0 and 100.0 minutes. If CI parameter set to 0.0, derivative will be disabled.

CD = CIA2 Output Derivative value. Adjustable between 0.00 and 25.00 minutes. If CD parameter set to 0.0, derivative will be disabled.

CE = CIA2 Output periodic time duration. Adjustable between 1 and 250 seconds.

CPSt = CIA2 output power percentage at A1 set value. Can be adjusted between 0% and 100%.

CEct = Control type selection for sensor failures. If $EPSt$ selected, controlling will be performed to according to $CEPs$ proportional control parameter. If $AutO$ is selected, controlling will be performed to last recorded set value percentage before probe failure.

CEPs = CIA2 Output power percent selection on probe failure. Can be adjusted between 50 and 100. If $CPSt$ set to 00 (On/Off Control) and $CEPs$ set to 0, output will be OFF, on failure, if $CEPs$ set to different value from 0, output will be ON, in case of failure.

SSSt = Soft start timer set value. This parameter determines how many minutes will be reached to the setpoint value on power-up. Can be adjusted between 0 and 250 minutes. If set to 0, the soft start feature will be canceled and the setpoint value will be reached maximum speed.

CLYP = Output controlling type selection. **HEAt** = Heating control can be performed. **COol** = Cooling control can be performed.

A1 This parameter will be activated if the CPb parameter set to "0".

A2 This parameter will be activated if the CPb parameter different from "0".

A3 This parameter will be activated if the CPb parameter set to "0" or $CEct$ set to $EPSt$.

B

ALLo = Alarm1 set value lower limit. Can be adjusted between 0 and $ALSH$ parameter value.

ALSH = Alarm1 set value upper limit. Can be adjusted between $ALLo$ and upper scale value.

ALHy = Hysteresis of the Alarm2 output. Can be adjusted between 1 and 50°C.

ALTP = Alarm1 types. Six alarm types can be selected. **inDE** = Independent alarm **dE** = Deviation alarm **bAnd** = Band alarm **bAni** = Band with inhibition **inCo** = A1 output independent cooling control **rELCo** = A1 output relative cooling control

B1 **ALSt** = Status selection for Alarm1 Output. If H is selected, A1 output is above the Alarm1 set value; ON. If Lo is selected, A1 output is above the Alarm1 set value; OFF.

B1 **ALSt** = Alarm1 condition selection on probe failure **on** = A1 Output is ON, in case of probe failure. **oFF** = A1 Output is OFF, in case of probe failure.

B2 **ALPb** = A1 Output, proportional band value. Can be adjusted between 0% and 100%. If $ALPb$ Parameter set to %0, On-Off control will be accepted.

B3 **ALIt** = A1 Output, integral value. Can be adjusted between 0.0 and 100.0 minute. If $ALIt$ parameter set to 0.0, integral will be disabled.

B3 **ALId** = A1 output derivative value. Can be adjusted between 0.00 and 25.00 minutes. If $ALId$ parameter set to 0.00, derivative will be disabled.

B3 **ALICt** = A1 Output Period Time. Can be adjusted between 1 and 250 seconds.

B3 **ALIPb** = A1 output power percentage at A1 set value. Can be adjusted between 0% and 100%.

B2 **ALIEP** = A1 Output power percent selection on probe failure. Can be adjusted between 0% and 100%.

B1 **ALTP** Parameter can not be displayed if $inCo$ or $rELCo$ is selected.

B2 **ALTP** Parameter will be activated if $inCo$ or $rELCo$ is selected.

B3 This parameter will be activated if the $ALTP$ parameter set to $inCo$ or $rELCo$ and if the $ALPb$ parameter is different from "0".

C

AL2Lo = Alarm2 set value lower limit. Can be adjusted between 0 and $AL2SH$ parameter value.

AL2SH = Alarm2 set value upper limit. Can be adjusted between $AL2Lo$ and upper scale value.

AL2Hy = Hysteresis of the Alarm2 output. Can be adjusted between 1 and 50°C.

AL2TP = Alarm2 types. Four alarm types can be selected. **inDE** = Independent alarm **dE** = Deviation alarm **bAnd** = Band alarm **bAni** = Band with inhibition

B1 **AL2St** = Status selection for Alarm2 Output. If H is selected, A2 output is above the Alarm2 set value; ON. If Lo is selected, A2 output is above the Alarm2 set value; OFF.

B1 **AL2St** = Alarm2 condition selection on probe failure **on** = A2 Output is ON, in case of probe failure. **oFF** = A2 Output is OFF, in case of probe failure.

oFFs = Offset Value. The offset value is added to the measurement value. This feature is used to eliminate errors that may occur due to the distance from the measuring probe to the measuring point. Can be adjusted between -99 and 100°C. Default value is 0.

D3 **dRdR** = RS485 Connection Address. Can be adjusted between 1 and 247.

D3 **bRud** = ModBus Baud Rate for RS485. Can be adjusted to off, 2.40, 4.80, 9.60, 19.20 and 38.40.

dInL = Digital input setting parameter. **nonE** = Digital input is closed. **onE** = The second set value is used if the digital input is active. **nRnu** = Manual mode starts in case of digital outputs is active and rational output generated according to period value in $CEct$ parameter and percentage value in $ALSt$ parameter. **dSPa** = If the digital input is activated, only temperature value will be indicated. **PLt** = Profile will be started if the digital input active and the $PLon$ parameter is set to **on**. **PHLd** = Profile will be in hold mode if the digital input active and the $PLon$ parameter is set to **on**.

FfEL = Function key setting parameter. **nonE** = Function key is OFF. **onE** = Function key is ON. **nCR** = 2nd. set value can be used by using function key. **nru** = Manual mode can be accessed by using function key. **dSPa** = Temperature value will be indicated by using function key.

D4 **RoLo** = Minimum Output Percent for Analog Output. Can be adjusted between 0 and RoH .

D4 **RoH** = Maximum Analog Output Percent for Analog Output. Can be adjusted between $RoLo$ and 100.

D

PLon = Profile Control Selection. **oFF** = Standard controlling. **on** = Profile controlling.

inPE = Input Type Selection. Please see "Input Type Selection Table" for details at the bottom of this page.

UnIt = Temperature Unit Selection. **oC** = °C **oF** = °F

FLt = Coefficient of Digital Filter. Provides a filter for displayed value. Adjustable between 1 and 200. If this parameter set to 1, digital filter runs quickly. If the parameter is set to 200, filter runs slowly. This parameter value should be increased in interference environments.

CoSE = Control output selection. **C-R2** = CIA2 (Relay) output selection. **o20** = 0-20 mA analogue output selection. **4-20** = 4-20 mA analogue output selection. **RCOn** = Control output selection for motorized valve.

RCob = Full opening time duration for Motorized Valve. Can be adjusted between 2 and 300 seconds.

RCCL = Controlling Period for Motorized Valve. Valve control output period as a percentage of $RCob$ time duration. Can be adjusted between 1% and 50%. This parameter adjusts how often the valve is operated, preventing unnecessary operation.

oFFs = Offset Value. The offset value is added to the measurement value. This feature is used to eliminate errors that may occur due to the distance from the measuring probe to the measuring point. Can be adjusted between -99 and 100°C. Default value is 0.

dRdR = RS485 Connection Address. Can be adjusted between 1 and 247.

bRud = ModBus Baud Rate for RS485. Can be adjusted to off, 2.40, 4.80, 9.60, 19.20 and 38.40.

dInL = Digital input setting parameter. **nonE** = Digital input is closed. **onE** = The second set value is used if the digital input is active. **nRnu** = Manual mode starts in case of digital outputs is active and rational output generated according to period value in $CEct$ parameter and percentage value in $ALSt$ parameter. **dSPa** = If the digital input is activated, only temperature value will be indicated. **PLt** = Profile will be started if the digital input active and the $PLon$ parameter is set to **on**. **PHLd** = Profile will be in hold mode if the digital input active and the $PLon$ parameter is set to **on**.

FfEL = Function key setting parameter. **nonE** = Function key is OFF. **onE** = Function key is ON. **nCR** = 2nd. set value can be used by using function key. **nru** = Manual mode can be accessed by using function key. **dSPa** = Temperature value will be indicated by using function key.

D4 **RoLo** = Minimum Output Percent for Analog Output. Can be adjusted between 0 and RoH .

D4 **RoH** = Maximum Analog Output Percent for Analog Output. Can be adjusted between $RoLo$ and 100.

E

Stun = Self tune Control Parameter. If $Stun$ key is pressed together, main screen displays and if the temperature is not high, PdE message flashes on display and the self tune process starts automatically. If the initial temperature is higher to self-tune, tEH message appears and waits until the temperature goes down. Then PdE message appears and self tune procedure starts automatically. After the self tune procedure, CPb , CI , CD and $CEct$ values are stored in memory and "Running mode" (main screen) is entered. After the successful self tune completion, $Stun$ menu will be removed automatically. In order to re-tune, $Stun$ parameter should be set to $PYEs$ in $SECU$ menu.

F

PLon = Profile Control Selection. **oFF** = Standard controlling. **on** = Profile controlling.

inPE = Input Type Selection. Please see "Input Type Selection Table" for details at the bottom of this page.

UnIt = Temperature Unit Selection. **oC** = °C **oF** = °F

FLt = Coefficient of Digital Filter. Provides a filter for displayed value. Adjustable between 1 and 200. If this parameter set to 1, digital filter runs quickly. If the parameter is set to 200, filter runs slowly. This parameter value should be increased in interference environments.

CoSE = Control output selection. **C-R2** = CIA2 (Relay) output selection. **o20** = 0-20 mA analogue output selection. **4-20** = 4-20 mA analogue output selection. **RCOn** = Control output selection for motorized valve.

RCob = Full opening time duration for Motorized Valve. Can be adjusted between 2 and 300 seconds.

RCCL = Controlling Period for Motorized Valve. Valve control output period as a percentage of $RCob$ time duration. Can be adjusted between 1% and 50%. This parameter adjusts how often the valve is operated, preventing unnecessary operation.

oFFs = Offset Value. The offset value is added to the measurement value. This feature is used to eliminate errors that may occur due to the distance from the measuring probe to the measuring point. Can be adjusted between -99 and 100°C. Default value is 0.

dRdR = RS485 Connection Address. Can be adjusted between 1 and 247.

bRud = ModBus Baud Rate for RS485. Can be adjusted to off, 2.40, 4.80, 9.60, 19.20 and 38.40.

dInL = Digital input setting parameter. **nonE** = Digital input is closed. **onE** = The second set value is used if the digital input is active. **nRnu** = Manual mode starts in case of digital outputs is active and rational output generated according to period value in $CEct$ parameter and percentage value in $ALSt$ parameter. **dSPa** = If the digital input is activated, only temperature value will be indicated. **PLt** = Profile will be started if the digital input active and the $PLon$ parameter is set to **on**. **PHLd** = Profile will be in hold mode if the digital input active and the $PLon$ parameter is set to **on**.

FfEL = Function key setting parameter. **nonE** = Function key is OFF. **onE** = Function key is ON. **nCR** = 2nd. set value can be used by using function key. **nru** = Manual mode can be accessed by using function key. **dSPa** = Temperature value will be indicated by using function key.

D4 **RoLo** = Minimum Output Percent for Analog Output. Can be adjusted between 0 and RoH .

D4 **RoH** = Maximum Analog Output Percent for Analog Output. Can be adjusted between $RoLo$ and 100.

G

SECU = Security menu access code. To accessing security menu, 442 should be entered.

SECU = Security Access Level for $CoSE$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $ALLo$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $ALSH$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $ALHy$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $ALTP Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.$

SECU = Security Access Level for $ALSt$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2Lo$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2SH$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2Hy$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2TP$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2St$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2Pb$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2IEP$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2IPb$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2ICt$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2IPb$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2IEP$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2IPb$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2ICt$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2IPb$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2IEP$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2IPb$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2ICt$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2IPb$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2IEP$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2IPb$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

SECU = Security Access Level for $AL2ICt$ Parameter. **nonE** = Menu invisible. **PYEs** = Modification can be done. **PNo** = Only visible.

MOTORIZED VALVE CONNECTION AND SETTINGS

Diagram-1

Motorized valve connection must be applied as shown figure above (if the motorized valve electrical values are incompatible with EUPx420 contact output values, an additional contactor must be connected). And $C.a.s.E.$ parameter in the EUPx420 must be selected as $R.c.o.n.$. Full opening time of the motorized valve connected to the device is entered in $R.c.o.t.$ parameter as seconds. Full opening time must be entered to $R.c.c.t.$ parameter as percentage for motorized valve running-up time.

ALARM1 AND ALARM2 OUTPUT TYPES

Diagram-2

Independent Alarm $R.i.t.P.=indE$

(ASV min. = beginning of scale
ASV max. = end of scale)
SV = CONT output set value

Deviation Alarm $R.i.t.P.=dE.$

(ASV min. = -300, ASV maks. = +300)
ASV = Alarm output set value

Band Alarm $R.i.t.P.=bA.n.d$

SV = CONT output set value ASV = A1 output set value
(ASV min. = 0, ASV max. = +300)

Band Alarm With Inhibition $R.i.t.P.=bA.n.i.$

Beginning Band alarm is possible

Beginning Band alarm is possible

SV = Set point of CONT output ASV = Set point of A1 output (ASV min. = 0, ASV max. = 300)

TIMER / THERMOSTAT OUTPUT DIAGRAMS

Diagram-3

A2 Output runs if the $C.a.s.E.$ parameter is set to 55r, 0-20 or 4-20 and with the $A2.P.c.$ parameter is set to on

PROFILE CONTROL OUTPUT DIAGRAMS

Diagram-4

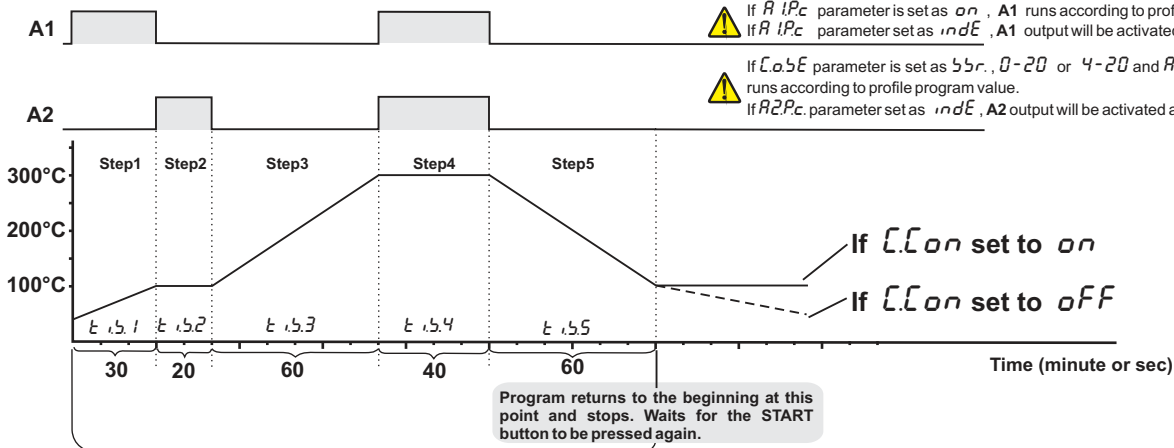

⚠ $\lambda.n.u.n$ must be set to 1 for single step program.

MULTI-STEP PROFILE CONTROL OUTPUT GRAPHICS

Diagram-5

	Step1	Step2	Step3	Step4	Step5
Target Temperature	$t_{E.01} = 100$	$t_{E.02} = 100$	$t_{E.03} = 300$	$t_{E.04} = 300$	$t_{E.05} = 100$
Time	$t_{i.01} = 30$	$t_{i.02} = 20$	$t_{i.03} = 60$	$t_{i.04} = 40$	$t_{i.05} = 60$
A1	ON	OFF	OFF	ON	OFF
A2	OFF	ON	OFF	ON	OFF

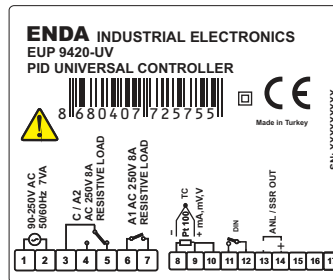

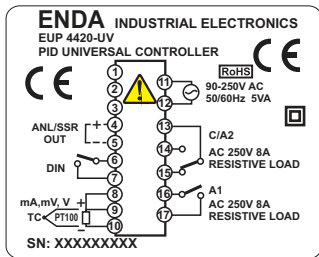

! $b_{n.05}$ parameter should be set to 5 for five step program.

! If $R1P_c$ parameter is set as on , A1 runs according to profile program value.
 If $R1P_c$ parameter set as $indE$, A1 output will be activated according to $R1SE$ value.

! If CC_{on} parameter is set as $b_{n.0-20}$ or $4-20$ and $R2P_c$ parameter set as on , A2 runs according to profile program value.
 If $R2P_c$ parameter set as $indE$, A2 output will be activated according to $R2SE$ value.

CONNECTION DIAGRAM

NOTE :

SUPPLY VOLTAGE

	EUP4420	EUP7420	EUP8420	EUP9420
90 - 250V AC veya 10-30V DC / 8-24V AC	(11) (12)	(11) (12)	(15) (16)	(1) (2)

! Holding screw 0.4-0.5Nm

□ Equipment is protected throughout by DOUBLE INSULATION.

Logic output of the instrument is not electrically insulated from the internal circuits. Therefore, when using a grounding thermocouple, do not connect the logic output terminals to the ground.

Note :

- 1) Mains supply cords shall meet the requirements of IEC 60227 or IEC 60245.
- 2) In accordance with the safety regulations, the power supply switch shall bring the identification of the relevant instrument and it should be easily accessible by the operator.

SENSOR INPUT:

For J-K-T-S and R Thermocouples: Use the correct compensating cable. Do not make any supplement to cables. Connect the thermocouple cables to the right places at the input terminal.

For resistance (PT100) Sensor :

In order to using 2-wire resistance sensors (PT100), 8th and 9th terminals must be short circuited on EUP4420, EUP7420 and EUP9420 devices, 10th and 11th terminals must be short circuited. Please check connection diagrams carefully.

DIMENSIONS

To removing the device from the panel:
- While pressing both side of the device in direction **1** and push it in direction **2**.

Connection Cables
Ambient temperature sensor

To removing the device from the panel:

Connection Cables
Ambient temperature sensor

To removing the device from the panel:
- While pressing both side of the device in direction **1** and push it in direction **2**.

Flush mounting clamp

ENDA EUPx420 Series PID Temperature Controllers are intended for installation in control panels. Make sure that the device is used only for intended purpose. The shielding must be grounded on the instrument side.

During an installation, all of the cables that are connected to the device must be free of energy. The device must be protected against inadmissible humidity, vibrations, severe soiling. Make sure that the operation temperature is not exceeded. All input and output lines that are not connected to the supply network must be laid out as shielded and twisted cables. These cables should not be close to the power cables or components. The installation and electrical connections must be carried on by a qualified staff and must be according to the relevant locally applicable regulations.

PANEL CUT-OUT

Note :

- 1) While panel mounting, additional distance required for connection cables should be considered (except EUP9420).
- 2) Panel thickness should be maximum 9mm for EUP4420, 10mm for EUP7420, 8mm for EUP8420 and 6mm for EUP9420.
- 3) If there is no free space at back side of the device, it would be difficult to remove it from the panel. Required minimum free spaces ; EUP4420 = 100mm, EUP7420 = 90mm, EUP8420 = 90mm, EUP9420 = 60mm.

C3	(0003)h	Bit	Alarm1 condition selection on probe failure (0 = Off , 1 = On)	R/W	<i>A1Er.</i>	0
C4	(0004)h	Bit	Control output configuration (0 = Heat ; 1 = Cool)	R/W	<i>ÇtçP.</i>	0
C5	(0005)h	Bit	Temperature unit (0 = °C ; 1 = °F)	R/W	<i>uçit</i>	0
C6	(0006)h	Bit	Control outputs active (0 = Control outputs active, 1 = Only display mode)	R/W	<i>----</i>	0
C7	(0007)h	Bit	Controlling according to 2nd temperature setpoint (If C7 = 0 is H0, if C7 = 1 is H1)	R/W	<i>----</i>	0
C8	(0008)h	Bit	Auto/Manual selection (0 = Automatic "Running mode", 1 = Manual "Running mode". In this mode, output generated according to H39 parameter.)	R/W	<i>----</i>	0
C9	(0009)h	Bit	Control format in case of probe failure (0 = H10 proportional control according to percentage value, 1 = Error found before the setpoint control is done with the value of the proportional control)	R/W	<i>ÇEçç.</i>	0

1.3 Memory Map for Input Registers

Parameter Number	Input Register Address Decimal (Hex)	Data Type	Parameter Description	Read / Write Permission
I0	0000d (0000h)	Word	Measured temperature	R
I1	0001d (0001h)	Word	Analog output percentage	R
I2	0002d (0002h)	Word	Measurement error codes 0 = No error, 1 = Sensor short circuit, 2 = Lower scale error, 3 = Upper scale error, 4 = Sensor connection lost, 5 = Wrong input selection.	R
I3	0003d (0003h)	Word	Self tune condition codes 0 = No error, 1 = Initial temperature is higher than 60% setpoint value, 2 = Calculating PID parameters, 3 = Calculating power set parameters	R
I4	0004d (0004h)	Word	Current (active) temperature setpoint.	R
I5	0005d (0005h)	Word	Reserved	R
I6	0006d (0006h)	Word	Current (active) decimal point value (0 = No decimal point, 1 = 0.0 Decimal point is tenths)	R

1.4 Memory Map for Discrete input

Parameter Number	Discrete Input Address	Data Type	Parameter Description	Read / Write Permission
D0	(0000)h	Bit	C/A2 Control output status (0 = OFF ,1 = ON)	R
D1	(0001)h	Bit	A1 Output status (0 = OFF , 1 = ON)	R
D2	(0002)h	Bit	SSR Output status (0 = OFF ,1 = ON)	R
D3	(0003)h	Bit	Digital input status (0 = OFF ,1 = ON)	R

ENDA EUPx420 SERIES PID TEMPERATURE CONTROLLER MODBUS PROTOCOL ADDRESS MAP

2.1 Memory Map for Profile Control Holding Registers

Parameter Number	Holding Register Address Decimal (Hex)	Data Type	Data Content	Read / Write Permission	Parameter Name	Default Value																																
PH0	0100d (0064h)	Word	Profile time base set value. (0 = 0000s, 1 = 00m59s, 2 = 0000m, 3 = 99m59s)	R/W	ت.ب.ز.ب.	0																																
PH1	0101d (0065h)	Word	Maximum number of steps (can be adjusted between 0 and 16. If set to 0, runs on timer/thermostat mode)	R/W	ب.ن.و.ن.	0																																
PH2	0102d (0066h)	Word	Target temperature difference for increasing the step. (It can be set between 0 and H3 parameter. If the step time is reached before the target temperature is reached when the profile is checked, then the difference between the target temperature and the measured temperature is expected to be less than or equal to this parameter value and then proceed to the next step. If the difference is smaller than or equal to this parameter, the timer is switched on. See Drawing-4 / page 4 on user manual).	R/W	ب.ع. ا.ب.	0																																
PH38	0138d (008Ah)	Word	Display selection parameter: It can take between 1 and 10 values. When 1 is selected, only the process value is displayed. When 2 and up values are selected, the step number and the process value are displayed alternately if 2 or more step profiles are programmed. The entered number indicates the number of seconds to display the step number. For example, if 4 is entered, the step number is displayed for 1 second in 4 seconds.	R/W	د.ب.ع.ل.	0																																
PH3	0103d (0067h)	Word	1st-Step target temperature set value (can be adjusted between H2 and H3 parameter) If PH1 parameter set 0, temperature setpoint for Timer/Thermostat mode.	R/W	ت.ع.01 ل.ب.ع.ت	200																																
PH4	0104d (0068h)	Word	1st-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter). If PH1 parameter set 0, time setpoint for Timer/Thermostat mode.	R/W	ت.ا.01 ت.ا.ن.ع	60																																
PH5	0105d (0069h)	Word	2nd-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.02	200																																
PH6	0106d (006Ah)	Word	2nd-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.02	60																																
PH7	0107d (006Bh)	Word	3rd-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.03	200																																
PH8	0108d (006Ch)	Word	3rd-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.03	60																																
PH9	0109d (006Dh)	Word	4th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.04	200																																
PH10	0110d (006Eh)	Word	4th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.04	60																																
PH11	0111d (006Fh)	Word	5th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.05	200																																
PH12	0112d (0070h)	Word	5th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.05	60																																
PH13	0113d (0071h)	Word	6th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.06	200																																
PH14	0114d (0072h)	Word	6th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.06	60																																
PH15	0115d (0073h)	Word	7th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.07	200																																
PH16	0116d (0074h)	Word	7th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.07	60																																
PH17	0117d (0075h)	Word	8th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.08	200																																
PH18	0118d (0076h)	Word	8th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.08	60																																
PH19	0119d (0077h)	Word	9th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.09	200																																
PH20	0120d (0078h)	Word	9th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.09	60																																
PH21	0121d (0079h)	Word	10th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.10	200																																
PH22	0122d (007Ah)	Word	10th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.10	60																																
PH23	0123d (007Bh)	Word	11th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.11	200																																
PH24	0124d (007Ch)	Word	11th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.11	60																																
PH25	0125d (007Dh)	Word	12th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.12	200																																
PH26	0126d (007Eh)	Word	12th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.12	60																																
PH27	0127d (007Fh)	Word	13th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.13	200																																
PH28	0128d (0080h)	Word	13th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.13	60																																
PH29	0129d (0081h)	Word	14th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.14	200																																
PH30	0130d (0082h)	Word	14th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.14	60																																
PH31	0131d (0083h)	Word	15th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.15	200																																
PH32	0132d (0084h)	Word	15th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.15	60																																
PH33	0133d (0085h)	Word	16th-Step target temperature set value (can be adjusted between H2 and H3 parameter)	R/W	ت.ع.16	200																																
PH34	0134d (0086h)	Word	16th-Time value can be set from 0 to 9999 seconds or minutes (changes with the depending on PH0 parameter).	R/W	ت.ا.16	60																																
PH35	0135d (0087h)	Word	A1 Output control bits in steps. <table border="1" style="width: 100%; text-align: center;"> <tr> <td>B15</td><td>B14</td><td>B13</td><td>B12</td><td>B11</td><td>B10</td><td>B9</td><td>B8</td><td>B7</td><td>B6</td><td>B5</td><td>B4</td><td>B3</td><td>B2</td><td>B1</td><td>B0</td> </tr> <tr> <td>Step8</td><td>Step7</td><td>Step6</td><td>Step5</td><td>Step4</td><td>Step3</td><td>Step2</td><td>Step1</td><td>Step16</td><td>Step15</td><td>Step14</td><td>Step13</td><td>Step12</td><td>Step11</td><td>Step10</td><td>Step9</td> </tr> </table> AL1 Output will be activated when related step bits are set. 4. MODBUS ERROR MESSAGES

Modbus protocol has two types error, communication error and operating error. Reason of the communication error is data corruption in transmission. Parity and CRC control should be done to prevent communication error. Receiver side checks parity and CRC of the data. If they are wrong, the message will be ignored. If format of the data is true but function doesn't perform for any reason, operating error occurs. Slave realizes error and sends error message. Most significant bit of function is changed '1' to indicate error in error message by slave. Error code is sent in data section. Master realizes error type via this message.

ModBus Error Codes

Error Code	Name	Meaning
01	ILLEGAL FUNCTION	The function code received in the query is not an allowable action for the slave. If a Poll Program Complete command was issued, this code indicates that no program function preceded it.
02	ILLEGAL DATA ADDRESS	The data address received in the query is not an allowable address for the slave.
03	ILLEGAL DATA VALUE	A value contained in the query data field is not an allowable value for the slave.

Message sample :

Structure of command message (Byte Format)

Device Address		(0A)h
Function Code		(01)h
Beginning address of coils.	MSB	(04)h
	LSB	(A1)h
Number of coils (N)	MSB	(00)h
	LSB	(01)h
CRC DATA	LSB	(AC)h
	MSB	(63)h

Structure of response message (Byte Format)

Device Address		(0A)h
Function Code		(81)h
Error Code		(02)h
CRC DATA	LSB	(B0)h
	MSB	(53)h

As you see in command message, coil information of (4A1)h = 1185 is required but there isn't any coil with 1185 address. Therefore error code with number (02) (Illegal Data Address) sends.
